20. ABSTRACT (Continue on reverse side if necessary and identify by block number) A search of the military literature was conducted to determine combat training requirements for Marine Corps rifle squads. Pertinent works are listed along with alphabetical lists of keywords and authors. Keywords are also indexed and arranged hierarchically within seven major categories to facilitate cross-referencing with the other lists. This information provides a foundation for further research and development.

FOREWORD

This bibliography is an outcome of research conducted under exploratory development task area ZF55-522.102 (Training Systems for Marine Corps Field Combat Exercises) and Work Unit SUCCESS (Small Unit Controlled Combat Events Simulation System). The bibliography was compiled as a reference resource for the development of training requirements for SUCCESS and was formatted initially as a "shelf listing" of the literature used on the project. However, subsequent requests by various Marine Corps and Army sources for copies of the list warranted publication of the list in its present format, which includes a taxonomy and index of key combat training topics.

Appreciation is expressed to Mr. William Berg, who made the extensive preliminary literature search.

J. J. CLARKIN
Commanding Officer

INTRODUCTION

Problem and Background

Because of the diverse nature and rapid mobility of modern warfare, members of Marine Corps rifle squads may be required to operate in a variety of environments (e.g., arctic, desert, jungle, and urban). Thus, they must be trained--through training programs that simulate combat as closely as possible--to perform effectively under all conditions.

Since the early 1950s, an increasing volume of literature related to squad level combat training has been published. We searched the literature, attending to military operations, training, and research that would contribute to the preparation of rifle squad members for the variety of tasks they may have to perform in future combat. A bibliography of articles meeting these criteria was compiled as a reference resource for the development of training requirements for the SUCCESS (Small Unit Controlled Combat Events Simulation System) project. Topics in this bibliography range from semi-independent engagements, with rifle squads functioning in ambushes and isolated incidents, to conventional operations, with squads serving as integral parts of a larger combat force.

Although much interest has been expressed in this bibliography by Marine Corps and Army sources, among others, it was available initially only as a "shelf listing" of the literature surveyed for the SUCCESS project. Further, means had not been provided to facilitate selective access to areas of interest within this extensive body of information.

Purpose

The purpose of this effort was to make the previously compiled bibliography available to interested parties in a format that facilitates selective access and retrieval.

Scope

The remainder of this report includes the following sections:

1. The bibliography itself, which is presented as a reference list. Each work included in the bibliography was read as an original source to ensure that the key topics identified for each article were adequately represented. It covers material published from 1950 to 1975.

2. A taxonomy of keywords identified for each article in the reference list. These keywords are ordered hierarchically according to their topical content under the following seven major categories: (1) Combat Effectiveness, (2) Combat Environmental Conditions, (3) Combat Operations, (4) Combat Support, (5) Organization, (6) Training, and (7) Weapons. Although a taxonomy of combat topics could contain thousands of keywords, the number of entries in this listing is limited to about 200 by using concepts that are reasonably specific but yet broad enough to include more than an occasional example. Some keywords occur only rarely in the literature, but are included because they cover essential combat subjects; others are listed more than once because they convey information pertinent to several categories.

3. An alphabetical listing of all keywords in the taxonomy. Each keyword is accompanied by (a) reference numbers, which enable the user to locate all the articles in the bibliography related to that keyword, and (b) taxonomy index numbers, which enable the user to locate the position of that keyword within the taxonomy.

4. An alphabetical listing of all primary and subordinate authors of articles included in the bibliography. Each author's name is accompanied by reference numbers, which enable the user to locate the articles in the bibliography credited to that author.

5. A listing of primary journals used in the literature search and primary contributing organizations.
